NATIONAL DIABETES EDUCATION PROGRAM  
**Tips to Help You Stay Healthy**

**There are many good reasons to take action to manage your diabetes.**

- Each day you are likely to feel good and have more energy.
- In the future, you are likely to stay healthy and prevent or delay problems that can involve your heart, blood vessels, eyes, kidneys, and nerves.

**Follow this four-step action plan. It will help you live a long and healthy life.**

**Step 1: LEARN ABOUT DIABETES**

Diabetes means that your blood glucose is too high. Glucose comes from the food we eat. An organ called the pancreas (PAN-kree-oh) makes insulin (IN-suh-lin). Insulin helps glucose get from your blood into your cells. Cells take the glucose and turn it into energy.

In **type 1 diabetes**, the pancreas does not make any insulin. In **type 2 diabetes**, the body does not make enough insulin or use it very well. As a result, glucose builds up in your blood and cannot get into your cells. If the blood glucose stays too high, it can damage your body. Adults most often get type 2 diabetes. **Gestational** (jeh-LEH-ah-suh-nul) diabetes occurs when a woman is pregnant. Starting it raises the mother's and her child's risk for getting diabetes, mostly type 2, for the rest of their lives.

**Step 2: KNOW YOUR DIABETES ABC'S**

- **A1C** measures your average blood glucose level over the past three months.
- High **blood pressure (BP)** makes your heart work too hard.
- **LDL**, or bad **cholesterol**, builds up and clogs your arteries. **HDL**, or good cholesterol, helps remove cholesterol from your blood vessels.

Test	Goal*	Check How Often?
<b>A1C</b>	Below 7	Every 3 years
<b>BP</b>	Under 130	Each doctor's visit
<b>Cholesterol</b>	<b>LDL</b> below 100 <b>HDL</b> above 40	At least once a year

\*For most people with diabetes

**Step 3: MANAGE YOUR DIABETES**

- Know your A1C's and blood glucose targets. Learn how and when to test your blood glucose, and how to use the results to manage your diabetes.
- Ask for a diabetes meal plan to help you choose healthy foods.

**Healthy food choices include:**

- Fats, vegetables, fish, lean meats and poultry, dry peas or beans, and low fat or skim milk and cheese
- Whole grain foods -- whole wheat bread and crackers, oatmeal, brown rice, and cereals

**Avoid foods that have a lot of sugar, salt, and fat.**

**Eat smaller portions of meat, fish and poultry, and larger portions of fruits and vegetables.**
