

McLaren Print System Order

Order No: 13451 Reprint Previous Order No: 5509
Order Date: 2015-08-28
User: Deborah Rodriguez
Phone: 810-678-4090

Ship Location: Mclare -Lapeer Region - North Branch FCC Att: Danielle
4482 Huron ST
North Branch , Mi 48461

Forms

Quantity: 500
Paragon Dept No: 65250
Dept Name: Metamora Admistration
Company Number: 810

Order Total Price: 0.00

Item Number: DCH-0457
Item Description: Inactivated Influenza Vaccine Information Statement
Revision Date: 8/7/2015
Print: 2 sided black and white
Paper: 20# White Text
Size: 8.5 x 11
Fold:
Finish: None
Drill: None
Misc Info: Must be ordered with MM-474 Consent

VACCINE INFORMATION STATEMENT

**Influenza (Flu) Vaccine
(Inactivated or Recombinant):
What you need to know**

Always check the expiration date and lot number on the vaccine. Do not use if the expiration date has passed or if the lot number is not as indicated. Do not use if the vaccine is frozen, has been shaken, or has any other signs of tampering.

1 Why get vaccinated?

Influenza ("flu") is a contagious disease that spreads around the United States every year, usually between October and May.

Flu is caused by influenza viruses, and it spread mainly by coughing, sneezing, and close contact.

Anyone can get flu. Flu strikes suddenly and can last several days. Symptoms vary by age, but can include:

- fever/chills
- sore throat
- muscle aches
- fatigue
- cough
- headache
- runny or stuffy nose

Flu can also lead to pneumonia and blood infections, and cause diarrhea and vomiting in children. If you have a medical condition, such as heart or lung disease, flu can make it worse.

Flu is most dangerous for some people: infants and young children, people 65 years of age and older, pregnant women, and people with certain health conditions or a weakened immune system are at greatest risk.

Each year thousands of people in the United States die from flu, and many more are hospitalized.

Flu vaccines can:

- keep you from getting flu,
- make the less severe if you do get it, and
- keep you from spreading flu to your family and other people.

2 Inactivated and recombinant flu vaccines

A dose of the vaccine is recommended every flu season. Children 6 months through 4 years of age may need two doses during the same flu season. Everyone else needs only one dose each flu season.

Some inactivated flu vaccines contain a very small amount of a mercury-based preservative called thimerosal. Studies have not shown thimerosal in vaccines to be harmful, but the vaccines that do not contain thimerosal are available.
