 Item Description: Understanding Glucose Levels
 Revision Date: 1/2019
 Print:
 Paper:
 Size:
 Fold:
 Finish:
 Drill:
 Misc Info: ds; bleed; bi-fold 80# cover

SIGNS AND TESTS

The following are blood glucose tests:

- **Fasting blood glucose level**
 Diabetes is diagnosed if higher than 126 mg/dL, on two occasions. Levels between 100 and 126 mg/dL are referred to as impaired fasting glucose or pre-diabetes. These levels are considered to be risk factors for type 2 diabetes and its complications.
- **Hemoglobin A1c**
 This number measures the amount of sugar in your blood. High blood sugars over a long period of time increase your risk for diabetes and the damage the disease can do to your body's arteries and organs.
 - Normal Range: 4% to 5.6%
 - At Risk For Diabetes: 5.7% to 6.4%
 - Diabetes: 6.5% or higher
- **Random (non-fasting) blood glucose level**
 Diabetes is suspected if higher than 200 mg/dL, and accompanied by the classic symptoms of increased thirst, urination, and fatigue. (This test must be confirmed with a fasting blood glucose test.)
- **Oral glucose tolerance test**
 Diabetes is diagnosed if glucose level is higher than 200 mg/dL after 2 hours. (This test is used more for type 2 diabetes.)

Spec Info: **NEED BY FRIDAY, FEBRUARY 15, 2019**
