The Cycle of Debilitation

*Pulmonary Rehabilitation Program
McLaren Regional Medical Center*

Cycle of Debilitation from Respiratory Disease

You first feel short of breath from moderate exertion.

You then avoid such activities to control shortness of breath. But lack of activity causes muscles to weaken and weak muscles use more oxygen than strong ones.

You soon feel short of breath from mild exercise, such as walking, and may make the mistake of further avoiding exercise.

As the body further weakens, you can become short of breath when bathing, dressing and even at rest.

Spec Info:

**Break this downward cycle !!!
Exercise and stay active !!!**
