About the Anticoagulation Clinic

McLaren Oakland's Anticoagulation Clinic has a team of pharmacists, all certified in Anticoagulation Therapy Management, who serve patients throughout Oakland County and beyond.

CoaguChek XS Meter is used, which is CLIA waived with built-in quality control check. All new lot testing strips are sent to the main lab in McLaren Oakland for side-by-side comparisons. The team also uses CoagClinic online software from StandingStone, and charting is scanned into McLaren's electronic medical records for physicians to access.

Our specialized professionals can:

- Identify prescription and non-prescription drugs or supplements that may conflict with Coumadin® (warfarin) therapy
- Manage Lovenox® (enoxaparin) bridging (per physician request)
- Provide educational consults to patients using the newer direct oral anticoagulants such as Eliquis® (apixaban), Pradaxa® (dabigatran), Savaysa® (edoxaban), and Xarelto® (rivaroxaban)
- Help avoid problems and dosing errors
- Provide dietary education regarding food interactions

Face-to-face visits provide:

- Scheduled appointments
- Finger stick blood draws
- Immediate INR results and dosage adjustments
- Take home printouts to summarize each visit
- Same day fax report to the physician
- Ability to call in patient refills
