Pain Management Center

Holistic evaluation and treatment

Breaking the cycle of pain

McLaren's Pain Management Center offers services to manage the full spectrum of pain. By evaluating a patient's physical, emotional and psychological needs, our pain specialist provides a responsive, thorough and individualized care plan. By combining innovative technologies such as floral procedures, the latest non-habit forming medications with careful examination we can create a focused treatment plan for each patient.

As an academic teaching clinic we have access to the newest treatments and technologies for the treatment of pain.

We know that all pain cannot be cured, but our multi disciplinary approach coupled with the latest technologies can manage a patient's pain allowing them to live a comfortable lifestyle.

Reduce pain, increase function, improve life

Pain is a natural component of the healing process following illness, injury or surgery. If it persists or is more intense than normally expected, it becomes its own "condition" and merits treatment. If ignored, or improperly treated or diagnosed, a cycle of pain, depression and inactivity often result.

Pain Management Center believes that, with an accurate diagnosis, pain can often be eliminated or effectively managed, and quality of life vastly improved.

Personalized plan of care

We believe that pain is unique to each person, so every plan of care is tailored to the patients' needs. Our physician looks not only for a solution to immediate pain, but also for the source of the problem. At every visit, a patient consults with a physician.
