

Premier Cardiovascular Care

Our commitment to cardiac care began with the area's first open-heart surgery performed by Seong M. Chi, MD, in 1966.

That commitment has continued in the 21st century with the opening of the Chi Heart & Surgery Center in 2007, providing 10 state-of-the-art operating suites, five cardiac catheterization labs, an on-site pharmacy, 47 private patient rooms for cardiac patients, and a dedicated outpatient floor with new imaging and noninvasive technology.

Supportive cardiovascular care

Electrophysiology: Studies, procedures and treatment of abnormal electrical activity of the heart, such as arrhythmia or heart rhythm disturbances, this could include diagnostic EP studies, ablations for atrial and ventricular arrhythmias and insertion of various devices including pacemakers, defibrillators and biventricular pacemakers.

Emergency services: Speed is crucial with heart-related emergencies. Our staff provides prompt and skilled diagnosis and treatment from the moment a patient arrives.

Endovascular Services: We offer the latest in Endovascular treatment options.

Heart Failure Center: This is a noninvasive option for identifying heart and vascular disease.

Pulmonary Hypertension Center: Patients suffering from pulmonary arterial hypertension can now receive local treatment with the area's only physician who is fellowship-trained in pulmonary hypertension.

R.E. Olds Anderson Cardiac Rehabilitation Center: One of only a few in Michigan, this center offers both inpatient and outpatient cardiac rehabilitation services in a safe and supportive environment.

Vascular Lab: McLaren's Vascular Lab provides a range of noninvasive tests and procedures, as well as vascular screening, to help physicians identify and diagnose early signs of cardiovascular disease.

Vascular Rehabilitation: Vascular rehabilitation program designed to improve the quality of life for patients suffering from peripheral arterial disease.

Venous Ablation: Radiofrequency and laser ablations for varicose vein treatment.
