INTERVENTIONAL RADIOLOGY IN CANCER TREATMENT

The team of interventional radiologists at the Barbara Ann Karmanos Cancer Institute is committed to providing outstanding and innovative care for patients using real-time images from X-ray, CT, ultrasound or MRI to address cancer with minimal discomfort and unprecedented precision. Interventional radiology (IR) provides a minimally invasive approach that could dramatically reduce pain, risk and recovery time. For more information, please visit karmanos.org/IR

COMMON IR PROCEDURES:

Central venous access catheters
Placement of port catheters, PICC lines and other types of IV's
Image-guided biopsy
For sampling of tissue for pathology to evaluate
Chemoembolization and Radioembolization
Blocks blood flow to liver cancer cells
Cryablation
Uses extremely cold temperatures to kill smaller tumors
Inferior Vena Cava filter
Placement of a device to prevent blood clots from going to the lungs
Gastrostomy (feeding) tube
For feeding and decompression of the stomach and/or intestines
