WHAT MAKES US UNIQUE?

- We offer a comprehensive diabetes clinic where patients are seen by a diabetic nurse educator. The educator and our team will help manage the patient's diabetes medications, provide one on one dietary counseling, and continuous glucose monitor placement.
- We have physicians who are certified in lifestyle medicine. They work with patients to help them reduce their medication requirements, live healthier, longer lives, and simply feel better.
- Our physicians are heavily involved in the community, offering medical care to Carriage Town Ministries, as well as offering outreach programs in the Flint area elementary schools.
- We offer home visits.
- We provide Fluoride varnish and dental health assessments for our pediatric patients.

- We offer medication-assisted treatment for opioid use disorder. Our doctors are licensed to prescribe suboxone for patients as well as expecting mothers who qualify.
- We have a daily Walk-in Clinic for same-day appointments.

OUR CLINICAL TEAM CONSISTS OF:

- A geriatrician who works in conjunction with a team of mental health specialists and physicians to take care of our elderly patients through our specialized comprehensive geriatric assessment clinic. Our team also cares for our patients when they are admitted to a nursing home, offers referrals to nursing homes, and provides home visits for our elderly patients.
- A board-certified Gynecologist/Obstetrician.
- A family medicine physician who is fellowship-trained in women's health.
- A women's health nurse navigator who will guide patients through questions, identify resources, and serve as a liaison between

the patient and the health care team. Our navigator also helps patients overcome barriers to care – whether they're financial, schedule-based, or personal.

- A lactation consultant who specializes in caring for moms who are breastfeeding or considering breastfeeding. She can help from before baby is born until the final weeks of weaning. She assists with common nursing problems including increasing milk supply, finding the best nursing position, and managing breastfeeding pain, infections, and clogged ducts.
- Behavioral medicine specialists who provide mental health care and management to help patients deal with common mental health illnesses, chronic stress, sleep problems, and smoking and alcohol cessation.
- A board-certified general surgeon for office-based procedure

OUR PHYSICIANS PERFORM A VARIETY OF COMMON PROCEDURES RIGHT IN THE OFFICE INCLUDING:

- Ultrasound-guided joint injections.
- Long-term birth control placement including Nexplanon and IUD.
- Skin procedures like removing lesions, biopsies, abscess drainage, suturing, wart and skin tag removals, and more.
- PAP smears for cervical cancer screening, cervix biopsies and colposcopy.
- Newborn circumcision and tongue tie release in the hospital and clinic.
