ANESTHESIA SIDE EFFECTS

DOI

What are the risks of anesthesia?

While anesthesia is usually very safe, no procedure is without risk. Your anesthesiologist will discuss this with you prior to your procedure. Factors that affect your risk include your health, your history of anesthesia, the type of surgical procedure, or postoperative care. If you have any concerns with your anesthesiologist.

After the procedure

When the surgery is complete, the anesthesia medications are stopped. You will be moved to the operating or recovery room. You'll probably feel groggy and disoriented.

You may experience common side effects such as:

- Nausea
- Vomiting
- Dry Mouth
- Sore throat
- Shivering
- Sleepiness
- Mild confusion

Spec Info:

You may also experience other side effects after you awake from anesthesia, such as pain, nausea, or dizziness. Your doctor will discuss these with you on your individual condition and type of surgery. Your doctor may prescribe a pain reliever or anti-nausea medication to reduce pain and nausea.
