WHAT IS A HOSPITALIST? YOUR EXPERI CARE TEAM

WHAT IS A HOSPITALIST?

A hospitalist is an attending physician who specializes in providing medical care to patients in the hospital. Think of them as your primary care provider while in the hospital. They focus on managing your acute illness and coordinate your care with other physician consultants.

They will also coordinate your discharge with the care team. Your hospitalist physician may have resident physicians working with them, who report to their attending physician for all management decisions. McLaren Oakland has 24/7 hospitalist team coverage. Our hospitalist providers strive to provide the best care possible.

They will discuss your daily treatment plan with you, and your representative upon request. You are also encouraged to ask them questions to help you gain a better understanding of your condition and management plan.

NOTES

Have a question or concern about your care? Write them down to be sure to ask your health care provider the next time you see them.
