

NONINVASIVE LIVER ELASTOGRAPHY ULTRASOUND

DIAGNOSTIC IMAGING NEAR YOU

McLaren Greater Lansing Imaging Center offers liver elastography ultrasound imaging.

Liver elastography is a test used to check for liver fibrosis. Elastography may be ordered if you have risk factors, signs, and symptoms of liver disease.

WHAT TO EXPECT

- A highly trained ultrasound technologist will do the scanning
- You will be asked to lie down
- A layer of gel will be placed over the right upper quadrant of the abdomen
- The exam usually takes 30 to 45 minutes
- The test is painless and noninvasive

PREPARATION

- You will need to avoid food and drinks for 8 hours before the ultrasound
- Fasting helps prevent gas build up which could affect the results of the test

Call (810) 625-2736 to schedule your appointment today.
