McLAREN FLINT  
FLINT, MICHIGAN

Date:

To:

From: BLOOD BANK

Subject: ANTIBODIES

We have identified the antibody \_\_\_\_\_  
\_\_\_\_\_ in your blood.

Please carry the enclosed card at all times. If you are ever in a hospital, make sure the people from the **LABORATORY** see the card.

An antibody is formed when you are exposed to a foreign protein molecule – called an antigen. This can happen from a blood transfusion, pregnancy or from the environment in which you live. Your body recognizes the molecule as foreign and your immune system makes a protein molecule – called an antibody. The presence of the antibody itself has no harmful effect on your health and is of consequence only when you require a blood transfusion, during pregnancy, or when you serve as a blood donor. Knowledge of your antibody would enable the hospital Technologist to obtain blood compatible with yours in less time.

Once you make an antibody – you have it for the rest of your life.

If you have any questions please feel free to call us **Monday – Friday 8:00 a.m. – 4:30 p.m.**

Our number is: (810) 342-4064.
