ANESTHESIA CONSENT

MCEN-1003

DISCLOSURE AND CONSENT - ANESTHESIA and/or PERIOPERATIVE PAIN MANAGEMENT (ANALGESIA)
 TO THE PATIENT: You have the right as a patient, to be informed about your condition and the recommended anesthetic/analgesia to be used so that you may make the decision whether or not to receive the anesthetic/analgesia after knowing the risks and benefits involved. This disclosure is not meant to scare or alarm you; it is simply an effort to make you better informed so that you may give or withhold your consent to the anesthetic/analgesia.

I voluntarily request that anesthesia and/or perioperative pain management care (analgesia) as indicated below be administered to me (the patient). I understand it will be administered by an anesthesia provider and/or the operating practitioners, and such other health care providers as necessary. Perioperative means the period shortly before, during, and shortly after the procedure.

I understand that anesthesia/analgesia involves additional risk and hazards, but I request the use of anesthetic/analgesia for the relief and protection from pain during the planned and additional procedures. I realize the type of anesthesia/analgesia may have to be changed possibly without explanation to me.

I understand that serious, but rare, complications can occur with all anesthetic/analgesic methods. Some of these risks are breathing and heart problems, drug reactions, nerve damage, cardiac arrest, brain damage, paralysis, or death.

I also understand that other complications may occur. Those complications include but are not limited to: (Check planned anesthetic/analgesia method(s) and have patient/other legally responsible person initial.)

_____ **GENERAL ANESTHESIA** - Post-op nausea/vomiting, drug allergy, injury to vocal cords, teeth, lips, eyes, awareness during the procedure, memory dysfunction/memory loss, permanent organ damage, brain damage, death.

_____ **REGIONAL BLOCK ANESTHESIA/ANALGESIA** - nerve damage, persistent pain and tingling, bleeding/hematoma, infection, local anesthetic toxicity leading to seizures, respiratory and/or cardiac arrest, medical necessity to convert to general anesthesia, brain damage.

_____ **SPINAL ANESTHESIA/ANALGESIA** - nerve damage, persistent back pain, headache, infection, bleeding/epidural hematoma, chronic pain, medical necessity to convert to general anesthesia, brain damage.

_____ **EPIDURAL ANESTHESIA/ANALGESIA** - nerve damage, persistent back pain, headache, infection, bleeding/epidural hematoma, chronic pain, medical necessity to convert to general anesthesia, brain damage.

_____ **MONITORED ANESTHESIA CARE (MAC) or SEDATION/ANALGESIA** - memory dysfunction/memory loss, medical necessity to convert to general anesthesia, permanent organ damage, brain damage.

LABOR EPIDURAL ANESTHESIA/ANALGESIA - I understand the following, among others, are possible complications or risks of the epidural and that while they are uncommon, they have been reported in the medical literature:

- Failure to relieve labor pain.
- Hypotension (low blood pressure).
- Back pain.
- Temporary nausea and vomiting.
- Breakage or needles, catheters, etc. possibly requiring surgery.
- Infection.
- Hematoma (blood clot) possibly requiring surgery.
- Postural puncture (spinal) headache which may require medical therapy and/or epidural blood patch.
- Persistent numbness and/or weakness of the lower extremities (legs).
- Rapid absorption of local anesthetic causing dizziness and seizures.
- Temporary total spinal anesthesia (requiring life support systems).
- Respiratory and/or cardiac arrest (requiring life support systems).
- Fetal distress resulting from one of the above complications.

Additional Comments/Risks: _____
